

## Case 2

02582 Computational Data Analysis

studentID1 & studentID2 ...

April 4, 2025

### **Introduction/Data description**

Brief problem formulation and an overview of data.

### **Model and method**

Here is the approach we took and the models we tried and why

#### **Model selection**

This is how we performed model selection

#### **Missing values**

This is how we handled missing values...

#### **Factor handling**

This is how we handled factor (categorical) variables...

### **Model validation**

This is how we performed our model validation and estimated the EPE

### **Results**

This is my chosen model (the best model).... Those are our results and our estimate of the EPE (given as an estimate of RMSE).
